

## Reverse Polarity Surface Cleaner

The Pro-Fusion Reverse Polarity Surface Cleaner (RPSC-5) is a new introduction to the welding industry that allows manufacturing companies to quickly and easily prepare metal surfaces for welding, brazing, soldering, or adhesion. Surpassing previous abrasion and chemical methods, the RPSC-5 provides optimum surface cleanliness and condition for subsequent bonding processes.

**Precision Components**

**Tool & Die**

**Medical**

- Removes all oxide layers and surface contaminants, even those normally trapped in microscopic crevices and pores.
- Eliminates mechanical abrasive techniques such as sand blasting, wire brushing, or others and their associated contamination issues.
- Eliminates the need for chemical etching or cleaning, thus leaving no residual film and requiring no chemical cleanup.
- Can clean various component sizes, including small, delicate parts that can not withstand chemical or abrasive cleaning methods.
- Can concentrate on small, specific areas of a part by masking if neighboring areas need not be cleaned.
- Quick and easy operation provides the optimum surface quality for welding, soldering or adhesion.
